

HumanPulse Protocol (\$HPP)

Prove Humanity. No Data. One Line of Code.

Solana Frontier Hackathon — May 2026

Global Losses from Digital Identity Fraud (2020-2026)

Source: Javelin Strategy & Research, 2025

The Internet Cannot Tell Humans from Machines

\$52B

Lost to Identity Fraud

Global losses in 2025 alone

800K

In a single LayerZero airdrop

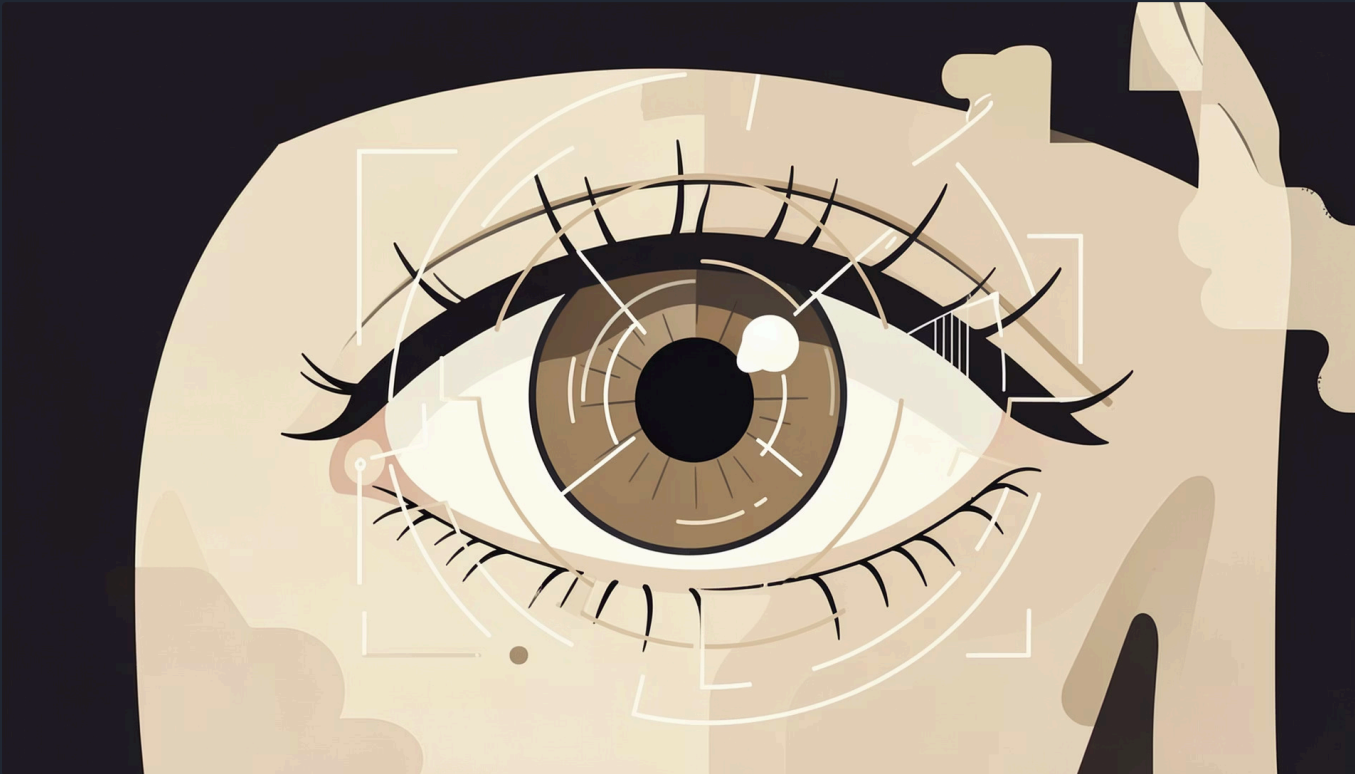

0

Effective Defences

CAPTCHAs, passwords and liveness tests
are all broken

"When intelligence is infinite, humanity is the only scarcity. And today, there is no scalable, privacy-preserving way to prove it."

Prove You Are Human — In Seconds, Not Minutes

The Core Innovation

- **Physiological signals:** Heartbeat and respiration measured simultaneously — extremely difficult for generative AI to replicate in real time
- **Unpredictable challenge:** A single dynamic instruction ("turn your head") that breaks automated replay attacks
- **Anonymous on-chain proof:** Verified on Solana with zero biometric data stored or persisted

i **Security = independent physiological signals + unpredictability + on-chain verification.**

What We Built — Live on Solana Devnet

Working Demo Features

- ☒ Camera-based liveness detection via rPPG (remote photoplethysmography)
- ☒ Real-time challenge-response flow
- ☒ On-chain mock verification completed
- ☒ Anchor smart contract: burn-on-use deployed
-  Live verification during demo with a real audience member

 **<10 seconds** per verification ·
<\$0.05 per verification · Full ZK integration in progress

Use Cases: From Sybil Resistance to Global Identity

Sybil Resistance (Killer Use Case)

800K+ Sybil wallets
identified by
LayerZero (2024)

UBI — Rio de Janeiro:

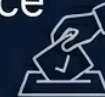

2.5M fraud
attempts
detected with
facial
biometrics
(2025)

Gaming — Valve banned 90K smurf accounts

Gaming —
banned 90K
smurf
accounts from
Dota 2 (2023)

Voting — Estonia e-voting since

Eliminate Bots from Airdrops — One Line of Code

The Market

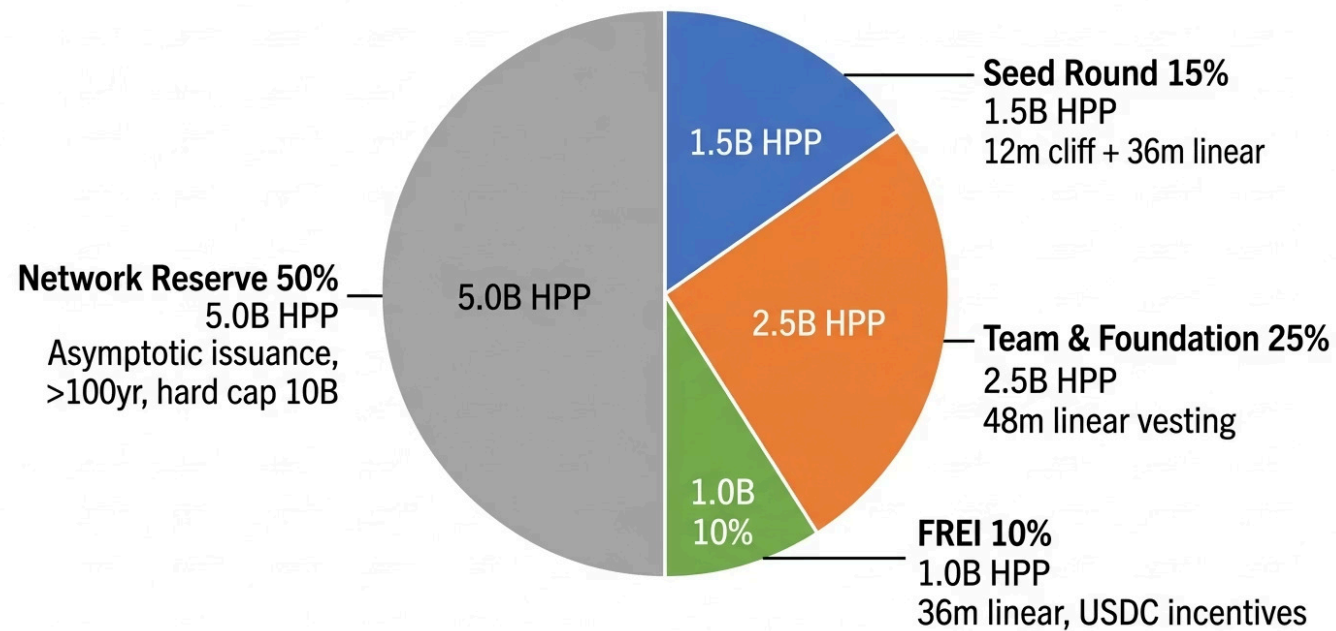

DAOs, launchpads and token launches all need Sybil resistance. Airdrops lose millions to bots. Worldcoin is fighting lawsuits. VeryAI raised \$10M from Polychain.

Why HumanPulse

- No proprietary hardware required
- Privacy-first by design
- Faster UX than any competitor
- Cheaper verification at scale

Tokenomics & Roadmap

Initial \$HPP Distribution (10 Billion Total)

\$HPP Token Economics

\$HPP is the native utility token used to pay for human verification. Required by applications as a verification fee. Fixed supply, no inflation – more usage drives more demand and a stronger network.

- Today: Sybil resistance
- Tomorrow: UBI, gaming, voting

Today

Working demo – webcam, widget, on-chain mock

1

Then

Scale to real users and integrations

3

Next

Full ZK verification on-chain

2

Team & What We're Looking For

Founding Team

- **Founder:** Vision, whitepaper, tokenomics
- Founder-led, actively assembling core team during hackathon
- Actively in conversations with ZK and biometrics researchers

📄 Technical Whitepaper v7.1 · Anchor smart contract on Devnet · Working liveness detection

Open Roles

Rust / Anchor Developer

Co-founder level — Solana smart contract architecture

Cryptographer

zk-STARK specialist — zero-knowledge proof integration

HumanPulse Roadmap 2026-2030

HumanPulse Protocol

"AI makes intelligence infinite. HumanPulse makes humanity provable — instantly, anywhere."

The heartbeat of humanity, the proof of truth.
